

RTM Prediction:  $k_{app} \propto L^{-\alpha}$   
Different Transport Classes

Simulated Experiment ( $\alpha_{true} = 2.2$ )  
 $\alpha_{recovered} = 2.23$

Data Collapse Test:  $k_{app} \times L^\alpha = \text{const.}^{0.499}$   
(Lower CV = better collapse)

Multiple Confinement Methods  
(Should yield same  $\alpha$ )
